Cover letter

As a software engineer and technical lead in Brazil and Ireland, I have been working with Internet and software programming for more than ten years, using the latest technologies available in the market. I have pursued and successfully build web systems, API's, e-commerce platforms and applications, mainly in PHP but also in Java, Python, Ruby and NodeJS, following programming best practices, software standards and design patterns.

Currently I am working at Smartbox Group, a multinational e-commerce based in Dublin - Ireland, as a Technical Lead, leading agile teams, mentoring developers and helping the company to integrate its micro-services and other backend API oriented systems, delivering high quality software and IT systems in order to meet the business goals.

Leadership values

In my experience leadership is not about being more experienced with a set of technologies, it's about being able to motivate peers and help them to perform. Although technical experience and expertise are very important, soft skills are also critical qualities of good leader being empathy, in my opinion, the most important one.

Software Engineering skills

Solid knowledge in object-oriented programming and design patterns; Scrum; Rapid Prototyping techniques for software development; Excellent communication skills; Swift learner; Knowledge about multiple programming languages; Creative thinking; Proactive and good at taking responsibility; Solid understanding about computer networks, protocols and the Web; Web cache layers, tools and strategies; Troubleshooting skills; Linux advanced user;

Software Engineering technology background

PHP; Symfony; Zend Framework; Laravel; Magento; Drupal; SQL; MySQL; Oracle 11g+; PostgreSQL; Subversion; Git; Apache; Nginx; Java; C/C++; Python; Ruby; NodeJS; Elasticsearch, Logstash, Kibana; Amazon Cloud Search; Redis; Apache Kafka; Grafana; New Relic; Zabbix; Chef; Vagrant; Docker; Linux; Shell Scripting.

Languages

Portuguese (Native) and English (professional working proficiency).

Experience

Technical Lead @ Smartbox Group, Ireland, from 07/2017 to present

Hands-on Technical Leader of agile teams. Helping the company to evolve and build its new vision for its Web Systems and Services, migrating its monoliths towards a more scalable service oriented stack. Delivering and improving the monitoring tools and techniques used by multiple web development squads. Analysing the new CI/CD challenges coming with the SOA adopted by the company and helping the Operations Engineering team to build the necessary strategies and tooling.

Senior Software Developer @ Smartbox Group, Ireland, from 05/2016 to 07/2017

Working in a large scale E-commerce platform building API integrations, microservices, Magento Enterprise

modules and PHP applications with high availability. Member of the company's Systems Architecture Committee to help the company design its systems and technical solutions. Member of the company's Code Quality Committee to drive programming best practices across software development teams.

Software Engineer @ CI&T, Brazil, from 01/2015 to 04/2016

Member of a *high performance team* working outsourced for international clients of **CI&T** such as Motorola, delivering PHP, Drupal, API's and Web solutions using agile methodologies to delivery software.

Software Engineer Outsourced @ Motorola, Brazil, from 01/2015 to 04/2016

Working at **CI&T** exclusively in **Motorola's** projects, member of an outsourced *high performance team*, developing its new platform generation of content managers and global e-commerce.

Hands-on Development Coordinator @ Aptor Software, Brazil, from 11/2012 to 12/2014.

After a while acting as a Hands-on Software Development Manager, I took the challenge of focusing more in the technical leadership and assumed the role of Development Coordinator, with a mission to technically advise developers, motivate adoption of new technologies, make technical decisions, make critical developments and monitor the work of the development team. In this transition, I planned and executed the deployment of our new development methodology, using Vagrant (Virtualization) and Git, to increase the standardization of our development environment and testing.

Hands-on Software Development Manager @ Aptor Software, Brazil, from 07/2010 to 10/2012.

Managing the Web Systems Development team and the Game Development team. Coordination and supervision of internship programs (more than 10 interns). Full participation in projects ranging from planning, implementation and maintenance, using modern techniques of agile development and project management with Scrum methodology.

Consultant & Web Developer @ Aptor Software, Brazil, from 08/2009 to 06/2010).

Consultancy in construction and usage of various web platforms such as: online journals publishing, events systems, project management systems, *CRM* systems, among others.

Software Developer @ Virgos IT, Brazil, from 01/2009 to 07/2009.

Development of VoIP and SMS applications using PHP.

Web Developer & Partner @ MUNDO10, Brazil, from 06/2006 to 12/2008.

Web Developer and partner of the startup, helping to build clients websites and small systems.

Education

Bachelor of Information Technology @ ICMC, University of São Paulo.

Participation in events related to technology as weeks of computer science, hackathons, professional meetings and seminars on entrepreneurship.

University extension course, Agile Product Management and vision on development projects for innovative products @ EESC, University of São Paulo.

Developed a fictional product called Smart Pen as course final project.
